GEOL 101. Physical Geology (GT-SC2). (3 Credits)
An introductory class that emphasizes the environmental aspects of geology. The course covers the basic principles of physical geology, such as minerals, rocks, plate tectonics, earthquakes, volcanoes, and origin of landscapes by mass wasting, rivers, glaciers, ground water, and nearshore processes. Throughout this course, focus is on the effect of geology on human society through the study of geologic hazards, energy resources, and mineral resources. GT-SC2

GEOL 105. Physical Geology Laboratory (GT-SC1). (1 Credit)
An introduction to identification of minerals and rocks and a discussion of their genesis followed by a study of landscapes formed by mass wasting, rivers, glaciers, ground water, and nearshore processes. Many of these principles are observed on local field trips. Additional course fee applies. Prerequisite or corequisite: GEOL 101. GT-SC1

GEOL 197. Special Topics. (1-6 Credits)

GEOL 201. Historical Geology (with laboratory). (4 Credits)
A study of the interpretation of the geologic history, structure, and evolution of the Earth with emphasis on methods and concepts rather than factual information. Colorado geologic history and various principles are observed during three or four field trips. Topics and concepts such as geophysics, continental drift, and plate tectonics are integrated into discussions of Earth history. Additional course fee applies. Prerequisites: GEOL 101 and GEOL 105.

GEOL 220. Field Geology of Western North America. (1 Credit)
An illustration of basic geologic principles using field trips to classic localities throughout western North America. Field trips change each year depending on student interest. Past field trips have gone to the Grand Canyon as well as other locales. A student may earn a maximum of two credits under this course number. Prerequisite: GEOL 201 or instructor permission.

GEOL 240. Introduction to Petroleum and Mining Geology. (3 Credits)
A survey of the physical and chemical processes responsible for the distribution of hydrocarbon and mineral resources in the Earth's crust and techniques for hydrocarbon and mineral resource exploration, assessment, and development. Includes field trips to oil and gas and mining operations in Colorado and Utah. Prerequisites: GEOL 101 and GEOL 105.

GEOL 297. Special Topics. (1-6 Credits)

GEOL 300. Geology Field Trip. (1-6 Credits)
Provides students exposure to varied geologic terranes and settings. The course normally consists of preparatory lectures and the actual field trip, followed by a paper, talk, or examination. Students may earn a maximum of six credits under this course title. Prerequisite: GEOL 201.

GEOL 302. Geoscience Writing. (2 Credits)
An introduction to the proper methods and accepted formats of written, graphical, and oral communication in the geological sciences. These skills are addressed through critical evaluation and discussion of the geological literature, by writing reports, review papers and research proposals, and giving oral presentations. Prerequisites: ENG 102 with a grade of C- or above and GEOL 201. Corequisite: GEOL 310.
GEOL 305. Mineralogy (with laboratory). (4 Credits)
An introduction to the study of minerals. Important topics include the crystallography, crystal chemistry, and optics of important rock and ore-forming minerals. Emphasis is placed on the crystal chemistry and stability of major silicate mineral groups. The laboratory emphasizes the field identification of minerals and the application of optics to the identification of minerals in thin section. Additional course fee applies. Prerequisites: GEOL 101, GEOL 105, MATH 141. Prerequisite or corequisite: CHEM 111 and CHEM 112.

GEOL 310. Stratigraphy and Sedimentation (with laboratory). (4 Credits)
A study of the basic principles and origins of sedimentary rock units. Topics studied include sub-division of the geologic column and geologic time, depositional systems, stratigraphic nomenclature and rules, principles of correlation, including a review of modern geophysical, geochemical, and chronostratigraphic methods, biostratigraphy, and event stratigraphy. Laboratory includes measurement of sections, examination of depositional systems in the field, and surface and subsurface stratigraphic techniques, including geophysical-log interpretation and computer mapping. Additional course fee applies. Prerequisites: ENG 102 with a minimum grade of C-, GEOL 201.

GEOL 311. Igneous and Metamorphic Petrology (with laboratory). (4 Credits)
A study of igneous and metamorphic rocks, including their classification, field relations, tectonic setting, phase petrology, mineralogy, and geochemistry. The laboratory emphasizes both field identification of rocks and the use of petrographic microscopes. Several field trips are included. Additional course fee applies. Prerequisite: GEOL 305. Prerequisite or corequisite: CHEM 113 and CHEM 114.

GEOL 320. Geomorphology (with laboratory). (4 Credits)
A study of the processes that create the landforms we see at the Earth's surface. In particular, processes associated with modern and ice-age climate are studied including erosion and weathering, soil formation, flooding, glaciation, and mass wasting. The laboratory emphasizes field-observation and data-collection techniques and the interpretation of aerial photographs. Additional course fee applies. Prerequisites: GEOL 101 and GEOL 105; CHEM 101 or CHEM 111.

GEOL 335. Introduction to Engineering Geology. (3 Credits)
An introduction to the fundamentals, methods, and techniques used in engineering geology. This course explores investigation methods, and characterization of the engineering properties of geological materials. We investigate the mechanics of soil and rock as engineering materials. This class introduces the specific field methods used in engineering geology for assessment of foundations, slopes, dams, tunnels, and other earth structures. Prerequisites: GEOL 345, and either PHYS 170 or PHYS 200.

GEOL 343. Exploration Geophysics (with laboratory). (3 Credits)
Current geophysical techniques used in the exploration for, and development of, petroleum resources. Topics include: potential fields methods, thermochronology, refraction and reflection seismic theory and application, an introduction to quantitative geophysics, microseismic, and forward and reverse modeling. Laboratory projects use industry standard geophysical data and software to solve problems in petroleum exploration and development. Additional course fee applies. Prerequisite: GEOL 310, Prerequisites or Corequisites: GEOL 345; and either PHYS 170 or PHYS 200.
GEOL 401. Career Pathways in Geology. (1 Credit)
Exploration of post-baccalaureate degree options. Students will receive guidance in finding and applying to graduate degree programs and job opportunities. This combined on line and face-to-face course will also provide a comprehensive review of material required by the Association of State Board of Geology (ASBOG) for the Fundamentals of Geology Exam (FGE). The FGE is the first step to becoming a licensed professional geologist. When available guest speakers will meet with students to discuss their career paths and experiences. Prerequisites: minimum junior standing or instructor permission.

GEOL 411. Research in Volcanology and Petrology (with laboratory). (3 Credits)
An examination of the physical volcanology, petrology, and petrogenesis of volcanic rocks. A strong emphasis is placed on fieldwork and the description of the volcanic rocks of the Gunnison Basin and adjacent regions. The course is topical in nature and emphasizes individual and/or group research projects through study of the geologic literature, the collection of geologic data, and the presentation of results. Prerequisite: GEOL 311.

GEOL 420. Research in Geomorphology (with laboratory). (3 Credits)
An advanced study of geomorphology. Topics may include fluvial, glacial, mass movement, neotectonic, and eolian processes and landforms as well as weathering and soils. The course is topical in nature and emphasizes individual and/or group research projects through study of the geologic literature, the collection of geologic data, and the presentation of results. Prerequisites: GEOL 320, GEOL 345, and GEOG 340.

GEOL 430. Hydrogeology. (3 Credits)
A study of the occurrence, movement and chemical properties of surface water and groundwater. Topics include the hydrologic cycle, surface-water hydrology, principles of ground water flow, groundwater flow to wells and natural water chemistry. Laboratory assignments focus on quantitative analysis and modeling of surface and groundwater data. Additional course fee applies. Prerequisites: GEOL 310, CHEM 111, and MATH 151. Prerequisite or corequisite: PHYS 170 or PHYS 200.

GEOL 435. Research in Structure and Tectonics (with laboratory). (3 Credits)
Advanced study of structural geology and tectonic processes, rheology and rock failure/deformation, and the relationships between plate boundaries, structural deformation and basin formation and fill. A strong emphasis is placed on field relations and structural analysis of outcrop and subsurface data. The course is topical in nature and requires individual and/or group research projects through the study of the geologic literature, the collection and analysis of geologic data, and the presentation of results. Additional course fee applies. Prerequisites: GEOL 310 and GEOL 345.

GEOL 450. Field Geology. (4 Credits)
An emphasis on field observation, proper geologic mapping techniques on both maps and aerial photos, and interpretation and synthesis of field data into a report. Different geologic terrains in Colorado or other states are examined. Ideally, this course should be taken during the Summer semester, immediately prior to the senior year. Additional course fee applies. Prerequisites: GEOL 310 and GEOL 345; or instructor permission.

GEOL 452. Advanced Field Geology. (2 Credits)
A study of advanced geological field techniques and special field problems that concentrate on the interpretation of rock types and structures, their distributions, and the collection of field data. Students will interpret field data and make connections between their field observations and the tectonic evolution of the Western United States. Additional course fee applies. Prerequisite: GEOL 450 with a minimum grade of "C-".

GEOL 455. Petroleum Geology (with laboratory). (4 Credits)
The petroleum system and modern exploration techniques including detailed study of petroleum source rocks, their deposition, thermal maturation and the chemical and physical characteristics of hydrocarbons, hydrocarbon migration, accumulation and retention, reservoir types and properties. Current techniques used in hydrocarbon exploration and resource assessment are taught through laboratory projects using real-world data and industry standard software tools. Additional course fee applies. Prerequisite: GEOL 346.

GEOL 456. Petroleum Geology of Unconventional Resources (with laboratory). (4 Credits)
The geology of unconventional resources, the identification and mapping of resource plays, a survey of current industry development and resource estimation techniques, and an introduction to play and project economics. Unconventional and emerging petroleum plays including shale reservoirs for oil and gas, heavy oil and bitumen deposits, coal bed methane, and hybrid reservoirs are emphasized. Projects include play mapping and analysis, rock mechanics, reservoir stimulation and EOR techniques, decline curve analysis and forecasting, and integrate sustainability and environment/stakeholder management best practices. Prerequisite: GEOL 346.

GEOL 465. Research in Basin Analysis (with laboratory). (3 Credits)
A study of sedimentary processes and environments, including the tectonic origin of sedimentary basins. This includes the most common terrestrial and marine depositional systems and their relationships. A strong emphasis is placed on field relations and research on the sedimentary rocks of Western Colorado and the Colorado Plateau. The course is topical in nature and requires individual and/or group research projects through the study of the geologic literature, the collection of geologic data in the field, and the presentation of results. Additional course fee applies. Prerequisites: GEOL 310 and GEOL 345.

GEOL 493. Independent Study in Geology. (1-4 Credits)
Advanced undergraduates can engage in independent research projects under the direction of a faculty member. Topics may include any research specialty in geology or geophysics depending on the mutual interests of the student and faculty.

GEOL 495. Geology Seminar. (1 Credit)
A seminar where advanced undergraduate students can develop critical reading and thinking skills through discussion and presentation of research literature. Topics are chosen from the current research literature. A student may earn a maximum of four credits under this course title. Prerequisite: GEOL 305, GEOL 310, GEOL 320, or GEOL 345.

GEOL 497. Special Topics. (1-6 Credits)
